

Vegetable Trial : White carrot

Location –Vietnam

Variety – white carrot

Harvest cycle: ~45 days

Date of Sowing –August, 2008

Date of Harvest – September, 2008

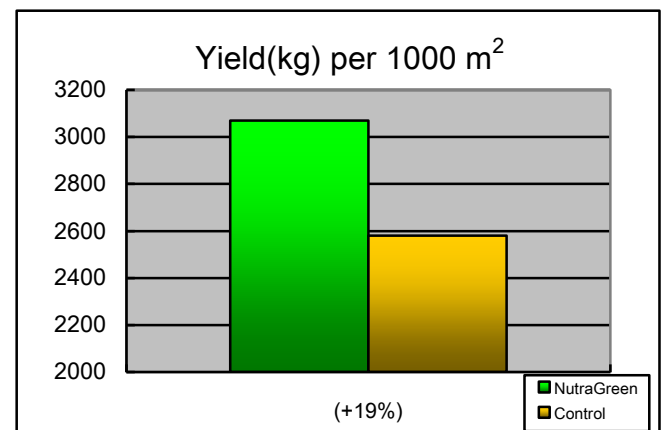

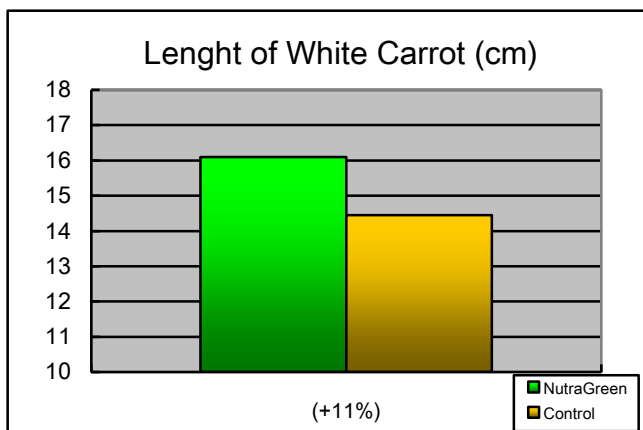

Application Process: 10, 21 and 31 days after sowing

Dilution Ratio of NutraGreen™: 1(NutraGreen™): 500(Water)

Trial Objective:

1. To measure the crop safety of NutraGreen™ spray applications
2. To see whether spraying of NutraGreen™ can increase the weight and yield.
3. To establish the appropriate rates, timing and frequencies of NutraGreen™ applications.

Result –

Control Plot

NutraGreen™ Plot

Conclusion:

The veggie in NutraGreen™ plot looks greener. NutraGreen™ enhance the yield and profit by 19% and 11% respectively.

Remarks: This trial data was recorded and supplied the farmer between August 2008 and September 2008.

“Control” refers to regular maintenance methodology including

a). 5kg UREA (after seeding 7 days)

b). 25 kg NPK (10 – 10 – 5) (after seeding 20 days)

“NutraGreen” refers to the addition of NutraGreen™ over regular maintenance methodology

Price of Cabbage: USD \$0.042 / kg
